

## Microsoft Visual Studio CompFin.sln setup

1. Determine if you have 32 or 64 bit MS Excel on your pc.
  - 2a. 32 bit:
    - a. Right click on the CompFin\_32 module in the *Solution Explorer*
    - b. Click Set as *Startup Project*
    - c. Select x86 in the *Solutions Platform* drop down
    - d. Go to *Debug/CompFin\_32 Debug Properties* and then to *Debugging*.
    - e. *Command* should contain the path of your local EXCEL.EXE
    - f. *Command Arguments* should contain /X "\$(TargetPath)"
  - 2b. 64 bit:
    - a. Right click on the CompFin\_64 module in the solution explorer
    - b. Click Set as *Startup Project*
    - c. Select x64 in the *Solutions Platform* drop down
    - d. Go to *Debug/CompFin\_64 Debug Properties* and then to *Debugging*.
    - e. *Command* should contain the path of your local EXCEL.EXE
    - f. *Command Arguments* should contain /X "\$(TargetPath)"
3. Hit *Local Windows Debugger* icon and confirm it launches Excel and loads the xll.
